How Are SMEs Using AI to Scale Their Businesses?

Autor: enhconsulting - 2026/08/20 08:28

Many small and medium-sized businesses are exploring AI to improve efficiency without significantly increasing their operational costs. I'm interested in hearing from business owners who have actually implemented AI in areas such as customer support, workflow automation, data analysis, sales, or marketing.

What AI tools or strategies have delivered the most noticeable results for your business? Was it difficult to identify the right use cases, integrate AI with existing systems, or train your team?

I've also noticed that working with an AI Consulting and Development Company in Dubai can help growing businesses evaluate practical AI opportunities instead of adopting technology simply because it's trending. I'd be interested to hear what others have experienced and which AI applications have provided the best return for SMEs.
